As a Commercial Truck Driver, I try to plan my trips in advance. I often use XM Radio's Instant traffic/weather before I enter a major city so that I can determine the best route to take to avoid delays. This information cannot be accessed by local radio stations due to the distance from those stations. Once I enter the city, I continue to listen to this station to monitor any new problems. This is such a beneficial program that I am looking forward to it's expansion into more major traffic areas. Please reject the NAB's petition 04-160 and allow XM Radio to continue to provide such an excellent service, one that can be heard from thousands of mile out, with crystal clarity. Thank you for your kind attention. Linda E. Cahill
